

6.170 Meeting Notes 11/6

Meeting start: 10:04AM

Pitch Comments

- Problem/Purpose
 - Current solution doesn't take into money and time
 - Eliminate the need to go to multiple platform
- Concepts:
 - Agony: metric of time and money associated with a route
 - Route:
 - Methods/Providers: Ways of getting from point A to point B
 - Availability??
 - Session
 - Cache: save previous search to deal with scenarios where APIs are broken (be clear about caching time)
- Data Model
 - Periodically purge.

MVP:

No user model, focus on key concepts. Use slider?

Make basic search work, use one of Uber and Hubway API; if time allowed, integrate more APIs.

Have search results ranked by time and cost, not implementing slider yet.

After MVP:

Maybe consider adding user model to see if adding users will be useful for the project. (Leaning towards not having user)
