

## Hiproute Progress Report 12/4

- Finished the code
  - All functionality are there
- App has Uber, Hubway, Google Results (Walking, MBTA) implemented.
  - Can select own bike vs Hubway
  - Have slider bar for selection of weight of time vs. cost
  - Can sort by Agony, price, time
  - Changing the slider bar no longer calculates by sending another series of Google requests but calculates locally.
- Addressed TA concerns
  - UI on selecting two places clears previous marker
  - Different colors for start/end markers
  - Bike has a special symbol
  - Has a distance check from MIT
  - Added in more comments in our code
  - Chose not to implement colors (did not like the UI)
